

# CITY OF SAN PABLO

## *Appendix A: Local Exceptions and Additional Requirements*

This Appendix allows cities, towns, or the County to identify any exceptions or additional requirements to the information provided in the *C.3 Guidebook*. The *C.3 Guidebook* sets the infiltration rate of the imported soils proposed for the treatment areas at a minimum of 5 inches an hour. To comply with the City of San Pablo (City) C.3 program, the initial infiltration rate cannot exceed 20 inches per hour in order to allow adequate time for treatment.

In addition, the following are required to implement C.3 requirements at the City.

- The Stormwater Control Plan must be certified by an architect, landscape architect, or civil engineer.
- A Stormwater Control Plan Review fee must be included with the submittal of the Planning Application Form. Please refer to <http://www.ci.san-pablo.ca.us/main/documents/masterfees.pdf> for the master fee schedule.
- A C.3 Permit must be obtained prior to construction from the Community Services Department. C.3 permits must be renewed annually. Please refer to <http://www.ci.san-pablo.ca.us/main/documents/masterfees.pdf> for the master fee schedule.

For further guidance, please call the Public Works Department at (510)215-3037.
